

# PROTECT & STIMULATE YOUR YEAST

Produced using the new  
**NATSTEP™**  
(NATural STERol Protection)  
process.

Through many years of research, in collaboration with the INRA French Institute, Lallemand has developed an efficient and 100% natural way to both protect & stimulate your wine yeast:  
**GO FERM PROTECT**

## ***PROTECTS your yeast with microprotectors:***

- Specific sterols
- Polyunsaturated fatty acids

strengthens the yeast membrane making it more resistant to fermentation stress.

## ***STIMULATES your yeast with micronutrients:***

- Vitamins
- Minerals

maximises yeast viability over the course of the fermentation process.

## ***OPTIMIZES yeast rehydration***

Yeast rehydration is optimised when using Go-Ferm Protect due to the new production process providing:

- Optimal content of bioavailable microprotectants and micronutrients.
- Enhanced uptake & assimilation of micronutrients & microprotectants by yeast during rehydration.

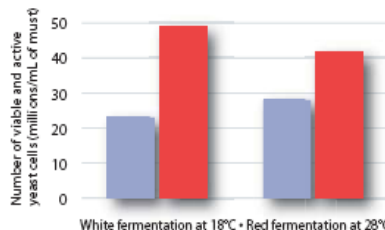

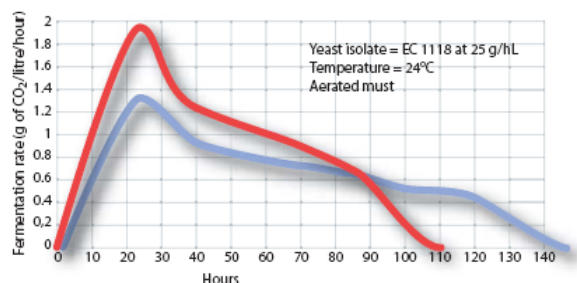

## GO FERM PROTECT - Yeast Protector

- Utilised during the yeast rehydration step.
- Formulation is rich in bioavailable microprotectors and micronutrients
- Improves yeast survival particularly in difficult fermentation conditions.

## Four essential reasons to use GO-FERM PROTECT

1. Improved fermentation rate & more rapid completion of fermentation. Facilitates greater tolerance to alcohol stress
2. Decreased risk of stuck alcoholic fermentation - greater yeast viability & survival through to the end of fermentation.
3. Reduction in the production of fermentation off-flavours, including volatile acidity & sulphides
4. Easy to use during yeast rehydration step

Yeast Survival at the end of alcoholic fermentation with (■) or without (■) GO-FERM PROTECT (INRA Montpellier, 2005)
